PROFILE

Computer Science graduate who likes working out what should be built, then building it. I have taken three full-stack products from a real user problem to requirements, scoping, and deployment, and I am most comfortable in the space between users, technology, and business. I combine hands-on engineering (Angular, FastAPI, React Native, PostgreSQL), SQL and dashboard-based analysis, and daily use of AI tools and LLM APIs. I am looking for Product Management, Product Operations, and Business Analysis roles where I can own problems end to end.

SKILLS

Product: PRDs, user stories, requirements, MVP scoping, prioritization (what to build vs. defer), workflow design, UX flows, Figma

AI: Claude, ChatGPT, prompt engineering, Gemini API integration, Vapi voice AI; Anthropic AI Fluency and Prompt Engineering certified

Data & Analytics: SQL (HackerRank Advanced), Tableau, Power BI, Excel, funnel and drop-off analysis, data cleaning and validation

Operations: Lead and candidate tracking, process design from scratch, cross-functional coordination, stakeholder communication

Technical: Python, JavaScript/TypeScript, Angular, FastAPI, Node.js, React Native, PostgreSQL, MongoDB, REST APIs, JWT auth, Git, Docker

Languages: English (fluent), Malayalam (native), Hindi (conversational)

PRODUCT PROJECTS

Ascendra — *Career Management Platform (live, built solo)* Live Product | GitHub

- **Problem:** Job searching is fragmented across spreadsheets, notes, and documents, so candidates lose track of application stages and follow-ups. I identified this from my own job search.
- **What I did:** Wrote the requirements and user stories, then built and deployed the product solo (Angular, FastAPI, PostgreSQL, JWT auth with refresh cookies): application tracking with an activity timeline, a resume vault, and dashboard stats.
- **Key decision:** Built and solidified the core pipeline workflow first, and deliberately deferred AI features, job-board scraping, community features, and mobile until that foundation was reliable.

DollarDairy — *AI-Powered Personal Finance App* GitHub

- **Problem:** People avoid tracking expenses because manual entry and rigid dashboards create too much friction.
- **What I did:** Built a mobile expense tracker (React Native, Node.js, PostgreSQL) with budgets, recurring transactions, and OCR receipt scanning, and integrated Google's Gemini API so users can ask about spending in plain language (e.g. "how much did I spend on food this weekend?").
- **Key decision:** Used an existing LLM API instead of building custom NLP, prioritizing reliable prompts and quick responses.

HikerNet — *Community Trekking & Trail Discovery (team of 3)* GitHub

- **Problem:** Trekkers struggle to discover trails and coordinate with companions, often relying on scattered group chats.
- **What I did:** Scoped the core user journeys for trail discovery and group coordination. Built the backend architecture, social features, weather integration, and interface (React Native, Node.js, MongoDB), self-teaching Figma for the design.
- **Key decision:** Chose MongoDB over PostgreSQL for a flexible schema that could evolve with user-generated trail data.

CRM Sales Pipeline Analysis — *Data Analysis Project* GitHub

- Cleaned and validated CRM sales-opportunity and sales-team datasets (8,800+ opportunities, $10M+ tracked revenue), then used SQL and Tableau to build an interactive dashboard covering revenue, win rate (48.16%), sales stages, monthly trends, and agent performance to pinpoint where deals were dropping off.

WordPlay — *Voice-First Vocabulary Coach* GitHub

- Built a conversational AI coach (Vapi, WebRTC, prompt engineering) that gives learners real-time spoken practice and feedback, prioritizing natural turn-taking over traditional flashcard drills.

EXPERIENCE

Operations Intern, Airlearn (Unacademy-backed), Bengaluru Sept 2026 – Present

- Create, tag, and verify vocabulary content across 13 languages in the company's content tool (60–70 words/day; 130+ on a new-language launch day); content goes live in the app as soon as it is entered, with no separate review step.

- Check each item in the app right after entering it (display, casing, overflow); also check pronunciation, spot-check translations, shorten over-long copy, create scenario images, and keep tracking spreadsheets up to date.

Consultant (Part-time), Admigo Overseas & Careers, Kochi Jun 2026 – Jul 2026

- Joined as the founder's first hire with no existing process, and took the initiative to fix intake and qualification bottlenecks at an early-stage advisory firm.
- Designed and built a lead-tracking workflow from scratch (logging status, following up, qualifying leads before they reached the founder), running roughly 30 candidates through it.

Python & Data Science Intern, QSpiders Global Connect, Bengaluru Jun 2026 – Aug 2026

- Worked on data preprocessing, cleaning, analysis, and scripting on real datasets in Python, building the analytical foundation I now apply to CRM and operational data.

Machine Learning & AI Intern, KELTRON, Kerala 2025

- Applied machine learning workflows, data preprocessing, and model evaluation in a structured engineering environment.

Cybersecurity Intern, Kerala Police Cyberdome, Kerala 2025

- Hands-on exposure to threat analysis and security operations in a law-enforcement environment.

Academic Learning Consultant, YoursTutor (Remote) Jan 2024 – Jun 2026

- Diagnosed knowledge gaps and adapted learning plans for 10+ students over a 2+ year engagement, maintaining full retention.

Social Media & Influencer Marketing Intern, Nomad Gifts, Kozhikode Jun 2023 – Nov 2023

- Managed creator outreach and end-to-end campaign deliverables; analyzed campaign performance data to identify high-engagement creator segments and optimize marketing spend.

LEADERSHIP & ACTIVITIES (GEC WAYANAD)

Student Innovation Lead, IEDC Oct 2024 – Jan 2026

- Led a 30+ member innovation cell across student initiatives, workshops, and startup projects, acting as the coordination bridge between student teams, faculty mentors, and institutional leadership.

Public Relations & Events Lead, ACE Jan 2024 – May 2025

- Led event coordination and public relations for technical and student programs, including events with 500+ attendees.

Secretary, IEEE Student Branch Jul 2023 – Jul 2024

- Coordinated chapter activities, technical events, and member engagement initiatives.

CERTIFICATIONS

- SQL (Advanced), HackerRank, Jun 2026
- AI Fluency Framework & Foundations, Anthropic, Jun 2026
- Claude 101: Prompt Engineering, Anthropic, Jun 2026

EDUCATION

B.Tech, Computer Science & Engineering, Government Engineering College, Wayanad May 2026

CGPA 8.34 / 10.0 | No backlogs or arrears

Higher Secondary (PUC): 99% | Secondary (SSLC): 100%
