

LEZIN SAJID

Product · Data · Technical Builder

Bengaluru, India | lezinsajid@gmail.com | +91 9562179012 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

Recent Computer Science graduate who's shipped 3 full-stack products solo — from writing requirements through building and deploying. Comfortable across the stack: Angular, FastAPI, PostgreSQL, and real production API integration (Google's Gemini API). Trained hands-on in Python and data science through a structured incubation program, with applied work in data preprocessing, cleaning, analysis, and scripting. Strong SQL foundation, and a genuine data-analysis project (CRM Sales Pipeline Analysis) built independently. Also spent a month as the first hire at an early-stage startup, building a process from scratch with zero existing structure. Equally comfortable doing product scoping, technical building, or data analysis — I pick up what a problem needs, and I've done all three in real, shipped work rather than just coursework.

SKILLS

Product: Requirements scoping, user stories, feature prioritization, MVP definition, spec writing, roadmap thinking, acceptance criteria

Technical: Python (strongest), JavaScript/TypeScript, Angular, FastAPI, PostgreSQL, REST APIs, Google Gemini API integration (shipped in production), Git/GitHub

Data & Analysis: SQL (HackerRank Advanced-certified), Excel, Power BI, Tableau Public, data preprocessing and cleaning, exploratory data analysis, working with structured and unstructured data

AI-Native: Claude, ChatGPT, Gemini API integration, prompt engineering — genuine product experience, not just casual use — Anthropic-certified

Design: Figma (self-taught, used to design HikerNet's UI)

Coordination & Ops: Process design from scratch, cross-functional coordination, documentation, stakeholder communication, tracking & reporting, market/competitor research

PROJECTS

Ascendra — Career Management Platform *(Live full-stack SaaS)*

- Identified the problem — fragmented job-search tracking — through personal experience and candidate conversations, and defined the MVP by prioritizing application management, resume organization, and workflow visibility.
- Wrote the product requirements and user stories, then built and deployed it solo using Angular, FastAPI, and PostgreSQL.
- Deliberately deferred AI features until the core experience was solid, rather than chasing a flashier v1.

[Live](#) | [GitHub](#)

DollarDairy — Personal Finance App *(AI-powered, mobile)*

- Designed and shipped a conversational expense-tracking experience by integrating Google's Gemini API, letting users query spending in plain language instead of navigating dashboards.
- Worked directly with API rate limits, prompt design, and decisions about how much financial data to expose to the model.

[GitHub](#)

HikerNet — Community Trekking Platform *(Mobile, group project)*

- Owned product scoping — defined core user journeys, prioritized MVP features, translated requirements into dev tasks, and coordinated execution across the team.
- Designed the UI in Figma, self-taught specifically for this project.

[GitHub](#)

CRM Sales Pipeline Analysis *(Data Analysis Project)*

- Worked with CRM sales opportunity and sales-team datasets — checked for missing or inconsistent values and structured the data for analysis.
- Used SQL for analysis and Tableau to build an interactive dashboard covering total opportunities, revenue, win rate, sales stages, monthly trends, agent performance, and revenue by industry.
- Compared multiple views of the data rather than relying on a single metric, so the dashboard gave real context, not just numbers.

EXPERIENCE

Python & Data Science Intern (Incubation Program) · QSpiders Global Connect

Jun 2026

- Worked hands-on with Python and data science tasks — data preprocessing, cleaning, analysis, and basic scripting.
- Used Python to work with real datasets, identify and validate data quality issues, and understand patterns and insights.
- Completed programming exercises and practical tasks that built applied data-workflow and analytical problem-solving skills, alongside structured training.

Consultant (Part-time) · Admigo Overseas & Careers — Kochi

Jun–Jul 2026

Company has since shut down

- Cold-emailed the founder to get this role — no formal hiring process existed yet.
- Candidates were being screened manually with no system in place, so I built a simple intake process to qualify leads before they reached the founder. Ran roughly 30 candidates through it, about a month before the company closed.

Student Innovation Lead · IEDC — Government Engineering College Wayanad

Oct 2024 – Jan 2026

- Led a 30+ member innovation cell across 6 concurrent initiatives, translating ambiguous faculty requirements into clear deliverables for student teams.
- Acted as the go-between for student teams and faculty leadership, keeping execution aligned with institutional goals.

Academic Learning Consultant · YoursTutor — Remote EdTech

Jan 2024 – Jun 2026

- Diagnosed knowledge gaps and adapted learning plans for 10+ students, maintaining full retention across a 2+ year engagement.

Social Media & Influencer Marketing Intern · Nomad Gifts (now TopoNomad)

Jun – Nov 2023

- Ran the full influencer campaign cycle — creator selection, outreach, negotiation, and performance reporting — and used campaign data to identify which creator segments drove the best engagement per rupee spent.

CERTIFICATIONS

- AI Fluency Framework & Foundations — Anthropic — Jun 2026
- SQL (Advanced) — HackerRank — Jun 2026

EDUCATION

Bachelor of Technology — Computer Science & Engineering

Government Engineering College, Wayanad, Kerala | CGPA: 8.34 / 10.0 | May 2026
